

AUTOMATIC CONDENSATE DRAIN - AOK20B

DESCRIPTION

AOK20B has been developed for fully automatic discharging of condensate or any other non-aggressive fluid from compressed air⁽¹⁾ system. The unit can be installed as external drain on any application specified below. Condensate accumulates in the aluminium reservoir and when the level is high enough condensate is being discharged from the system without any air losses. Direct acting valve is operated by precise level controlled floater which assures reliable and efficient operation. Thanks to robust aluminium housing AOK20B is suitable for heavy duty applications. AOK20B is also equipped with separate manual drain for venting.

APPLICATIONS⁽²⁾

- Air Compressor (piston or screw)
- After-cooler
- Cyclone condensate separator
- Pressure vessel/Air tank
- Air dryer
- Air filter

⁽¹⁾For any other technical gas please contact us or your local dealer

⁽²⁾AOK20B can be used in variety of applications. For applications not listed please contact us or your local dealer.

TECHNICAL SPECIFICATION

Operating temperature	1,5 - 65 °C	35 - 149 °F
Operating pressure	0 - 20 bar(g)	0 - 290 psi
Minimum recommended operating pressure	1,5bar (g)	21,8 psi
Operating media	Condensate (air, water, oil); Non-aggressive	
Nominal discharge capacity	167 l/h (at 7barg)	252 l/h(at 16barg)
Discharge orifice cross section	1,8mm	0,0708 inch
Inlet connection	G ½" (NPT on request)	
Outlet connection	G ½" (NPT on request)	
Reservoir volume	0,4 l	
Weight	0,6 kg	
Valve type	Direct acting, Normally closed	

MATERIALS

Housing material	Aluminium (EN-AC-46000)
Fittings, Screws	Brass, Brass-zinc plated, Steel
Floater	Stainless steel 1.4301
Sealing	NBR
Cover	PA 6

CAPACITY

	Northern Europe, Canada, Central Asia	Rest of the world	Moist tropical and subtropical regions
Peak compressor capacity [m3/min]	110	100	60
Peak dryer capacity [m3/min]	240	190	120
Peak filter capacity [m3/min]	1200	970	600

The amount of condensed water in compressed air system depends mainly on outside air temperature. Above specified flows refer to discharge capacity at operating pressure 7barg.

CALCULATION OF CAPACITY

For rough calculation of discharge capacity at certain pressure use following equation:

$Q = 63\sqrt{\Delta p}$ Example: if operating at 7barg; $Q = 63\sqrt{7} = 166,7$

DIMENSIONS

Type	A	B	C
AOK20B	135	110	130

**PRESSURE EQUIPMENT DIRECTIVE
PED 97/23/CE (Fluid group 2)**

Product type	Category, module
AOK20B	Not required

MAINTENANCE

Once per year make a visual check of the drain and make sure there is no visual damage or leakage. Clean interior of the reservoir regularly. Intervals of cleaning depend on contamination of condensate. Replace the sealings if necessary.

RECCOMENDATIONS

- We recommend the use of ball valve between pressure vessel and inlet connection.
- We recommend the use of strainer element between pressure vessel and inlet connection.
- We recommend the use of nipple with venting tube to avoid generation of air bubbles. Nipple is screwed in inlet connection.

Condensate discharged from compressed air system contains significant amounts of lubricant oil. We strongly recommend connecting AOK20B to oil water separator. In most countries content of oil in waste water is regulated by law.
